

GMB/A

Advanced Adaptor Bars System

The GMB/A is a masterpiece in versatility and design. It features vertical and horizontal braces which can be adjusted with a turn of a knob. This allows your matte box to be aligned perfectly without any fuss. The top adaptor plate slides back and forth to accommodate any lens length and can be removed for easy camera mounting while the base tripod plate is simple to fix onto your tripod.

“The GMB/A is a great way to add bars to a system where you are constantly changing between different length lenses, and the sliding mechanism functionality... no other bars system does this for me”
